

Some good news and important information about Covid-19 for the holiday season! ❄️

Children are at very low risk from covid

Children are unlikely to experience severe covid symptoms. For both prevention and treatment you can support their immune systems and treat symptoms as you would usually do for colds and flu.

Natural immunity is the best!

We know that natural immunity gives you the best protection against coronavirus and its variants. Viruses mutate constantly and the variants differ from each other by a very small amount. The good news is your immune system recognises all the variants as being the same. If you have had Covid-19 you do not need a vaccination

There are safe, effective treatments for Covid-19

Please see the suggestions overleaf and do share with your family and friends. These have been extremely successful in many parts of the world reducing hospitalisations and death rates dramatically.

holiday
season

You can help prevent and treat Covid-19 at home

There are growing questions about Covid-19 policies. These include concerns about vaccine safety and effectiveness as well as PCR testing that overstates the case numbers.

We offer you a common-sense and effective approach to treatment and prevention using safe, long-established and low-cost supplements and medicines.
